

## System 10 PRO Components

### Space Diversity

Each System 10 receiver has two antenna which automatically and continuously compares and selects the best of the two signals.

### Frequency Diversity

System 10 transmitters output identical signal on two different frequencies. The System 10 receiver again automatically and continuously compares and selects the best of the two.

### Time Diversity

Likewise two packets of identical data are transmitted using time shift so that a back-up is always available.
